View Link: <https://learn.ethereallab.app/assignment/v3/IT265-002-S2026/it265-case-study-color-theory/view/rr257>

Instructions

Step 1: Recommended to use your original choice from the Atari Case Study, but if it's just black and white a different retro game of your choice may be picked (preferably first-generation systems or older).

- For reference, here are the links from the prior assignment:
- <https://www.free80sarcade.com/all2600games.php>
- <https://games.aarp.org/category/atari-games>
- <https://playclassic.games/games/action-atari-2600-games-online/keystone-kapers/play/>
- <https://www.tripletsandus.com/play-classic-80s-arcade-games/play-atari-2600-video-games/>

Step 2: Analyze the color/design further and come up with a modernized sketch/outline/etc per the below tasks. I understand not everyone is an artist (neither am I) hence the goal of these are sketches, but you're free to be more elaborate.

Step 3: Save the worksheet. Export the PDF. Upload it to GitHub. Upload the PDF to Canvas.

Section #1: (2 pts.) Exploratory Analysis Of Original Game

Progress: 100%

Task #1 (0.67 pts.) - Color Schemes Identification

Progress: 100%

Details:

Include relevant screenshots of the game. You don't need to go crazy with this but do capture the essence.

Generic view of the game, showcases the spaceship on bottom with the different but unique aliens on top flying towards us.

Our Spaceship getting hit or shot by enemy blows us up causing those particle effects, transitions from orange to red.

Showcases the alien flying and most importantly our spaceship blowing up one of the aliens and the visual effect of that.

Saved: 2/23/2026 11:21:27 PM

⇒ Task #2 (0.67 pts.) - Analyze how these colors contribute to the game's atmosphere

Progress: 100%

Your Response:

These colors on the game contribute greatly to the game. In particular the background being black emphasizes the fact that we are currently in space, and the spaceship being white with a bit of red really does emphasize this as well. It's a clear yet simple drawing that achieves everything it wants. By the spaceship having the color white, it contrasts with the background greatly so it is easy for the player to see where they are

constantly. Lastly the aliens each have unique colors and are layered in a way so it's easy to understand. The different color aliens contribute by emphasizing how different they are to the spaceship.

Saved: 2/23/2026 11:24:08 PM

⇒ Task #3 (0.67 pts.) - Compare with a modern equivalent

Progress: 100%

Details:

- Mention the comparison game (can be more than one game)
- Compare the use of color to the modern game and highlight how color usage evolved (or devolved)

Your Response:

There are some modern equivalents that take inspiration from the Galaxian as well as the sequel Galaga. In particular a game like Galaxiga has really embraced the different colors and has the aliens be really detailed with the bosses being extremely detailed with lots of different colors. In general the background has stayed a consistent black and or sometimes blueish hue like the side of this website. With white or yellow stars to emphasize the fact that the player is in space. The usage of color has definitely evolved to be more intricate and capture the players interest, especially since this game isn't the only one with color anymore in the modern age.

Saved: 2/23/2026 11:28:42 PM

Section #2: (2 pts.) Creative Conceptualization For Redesign

Progress: 100%

⇒ Task #1 (1 pt.) - Modern Mood/Theme Proposal via Color

Progress: 100%

Details:

- Propose a revised mood or theme for the game, justified with a new color scheme
- Explain your choice of colors using color harmony rules (e.g., analogous, complementary)

Your Response:

A new color theme for the game could possibly be a mixture of colors, for example, we still shoot aliens but we fly by planets this time, of course this in consideration with a modernish retro game. So for example, let's consider 3 planets, one planet is green and blue to be similiar like earth's forests and water, this one is self explanatory in the sense that it's suppose to reflect earth. We can also do a mixture of orange and brown to emphasize a planet like mars or jupiter depending how much detail we add and we can have a final planet of just blue and white to emphasize an faraway planet like neptune which can be very cold hence why the white. To summarize we start off on a easier planet like earth green and blue, considerably speaking friendly colors. Then we move to orange and brown a much more hostile environment. Then we move to blue and white to emphasize how cold and faraway this final planet is.

Saved: 2/23/2026 11:36:06 PM

⇒ Task #2 (1 pt.) - Narrative Enhancement Through Color

Progress: 100%

Details:

- Explain how color can be used to enhance storytelling within the game (this may be a stretch in some cases, but answer it the best you can)
- Provide examples/descriptions that illustrate your narrative color choices

Your Response:

Rather than color directly we can change some of the ships colors to be a mixture of white with pixel pieces of the players ship to make it seem like they've take out other ships like ours. Overall though we can emphasize color with bosses possibiliy as well so the player is able to tell the difference as well as emphasize the strength of the alien in the story.

Section #3: (2 pts.) Design Sketching And Color Application

Progress: 100%

🖼️ Task #1 (1 pt.) - Gameplay Mechanics and Color Integration

Progress: 100%

Details:

- Sketch gameplay elements or mechanics enhanced by your new color scheme (excludes interface as it's a different question/task)
- Provide concept art that showcases the updated visual style

- Provide concept art that showcases the updated visual style
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.

Picture is heavily pixelated but it shows a frog design of the alien for the first level.

Similar to the green frog but it's orange and red and brown.

Cold version of the frog, blue and white mixture.

Saved: 2/24/2026 1:18:08 AM

⇒ Task #2 (1 pt.) - Explain the choices of your sketches

Progress: 100%

Details:

- Describe how these color choices affect player interaction and engagement
- Explain the rationale behind each color choice and its expected impact

Your Response:

The three different color variations of the frog emphasize the three different worlds. The earth has the froglike colors which can be argued for story telling as well as blending in. It's suppose to be a slightly more inviting alien that's trying to blend in. Overall, shows the player that they are on earth too. The next alien is same structure but has orange and brown hues to blend in with the mars look of orange and brown for the planet, they're can be story elements to this color as well. Lastly the cold version of the frog, has blue, white, and darker blue colors to emphasize how it also blends in. However, this alien himself is different structure wise to the other two, to emphasize that this level is the final with the hardest, strangest aliens.

Saved: 2/24/2026 1:22:45 AM

Section #4: (2 pts.) Audiovisual Reimagining And Ui/ux Modernization

Progress: 100%

⇒ Task #1 (0.67 pts.) - Complementary Sound Design

Progress: 100%

Details:

- Briefly outline how sound design complements the visual color scheme
- Mention if specific audio cues align with color changes or themes (use details)

Your Response:

Sound design complements visual color scheme greatly, for example, if you are in let's say for this context, related to the changes I made with earthly colors of blue and green, you could have sound/background noise of wind and or chirping or something alongs those lines to emphasize nature and peace. Then you can take that same wind sound and apply it to orange and brown colors and all of a sudden it can sound harsh or cruel. Finally with the ice or blue and white aspect you can truly emphasize how cold it is with wind, and cracking for ice as well. Overall, specific audio cues can align with color changes or themes greatly, take for example the transition from a planet to space to travel, we could have the sound of a spaceship taking off play and play a unique sound depending on the planet were on. On earth it'll sound normal, on mars let's say it'll sound distorted slightly and more harshed, and on the ice planet it would be silent or even more harsh depending if the game ends or continues.

Saved: 2/24/2026 1:03:26 AM

🖼️ Task #2 (0.67 pts.) - UI/UX Color Scheme

Progress: 100%

Details:

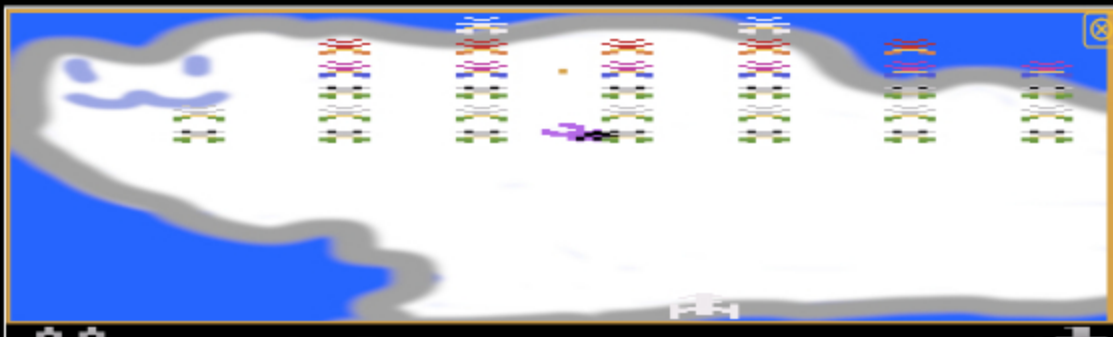

- Sketch UI/UX elements highlighting the integration of your new color scheme
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.

Earth in background,(Specifically the continent of Africa) and we have the spaceship and aliens fighting against each other.

Mars mountain in the background, and again have the aliens and player fight each other.

Ice background with blue and white with some gray and a smiley face. Though in the future I'd probably get rid of the smiley fac

Saved: 2/24/2026 1:04:15 AM

⇒ Task #3 (0.67 pts.) - UI/UX Color Functionality

Progress: 100%

Details:

Detail how color enhances usability, player feedback, and overall aesthetic. Include considerations for accessibility.

Your Response:

These colors choices show the player essentially traveling from earth to a faraway planet. Take this for example, we start off on earth, which is green and blue, then we leave and get into a travel stage with a black background like the normal game has, then we get to the next planet which is brown and orange like I said. Overall, this is suppose to show the player that there is somewhat of an objective in terms of traveling and destroying aliens. They also let the player know where they are in position to completing the game without just telling them what stage number they are at. The rationale is that in the beginnning stages you are still learning and getting better and the final stage is suppose to a boss who is at what we consider the edge of the "universe" or in better words literally the end.

Section #5: (2 pts.) Reflection

Progress: 100%

⇒ Task #1 (1 pt.) - Reflection on Color Theory in Game Design

Progress: 100%

Details:

- Reflect on how the application of color theory principles can transform the player experience
- Discuss challenges faced in applying color theory to a classic game

Your Response:

The application of color theory principles can transform the player experience greatly by essentially adding a more linear story in front of ours eyes, but also letting the story build up to the final boss in terms of the planet, being blue and white, cold and far. Overall, the challenges in applying color theory to retro games, is that we are very limited with we can/could do at the time. A different background like this, technically isn't that difficult once you get a drawing of one, since you kinda just the colors adaptively speaking. The application of color theory in general allows the player to experience more, learn more, and overall find the game more satisfising to play.

Saved: 2/23/2026 11:42:34 PM

⇒ Task #2 (1 pt.) - Personal Learning Experience

Details:

- Share insights gained from this assignment, particularly in relation to color's impact on game aesthetics and mood
- Evaluate the effectiveness of your redesign choices based on color theory

Your Response:

Some personal insights I gained from this are the fact that color plays a huge role in video games, especially so in retro games. Imagine if colors were inverted. I would basically lose my eyes from the strength of the white background. Overall, I'd say my redesign choices complement the original idea, but still are unique enough to where they stand out and add lots of life to the game.
